PROFESSIONAL SUMMARY

Software Developer with 2.6 years of experience building production-grade UIs, automation workflows, and AI-integrated applications using React, Next.js, and TypeScript. Hands-on experience integrating multi-provider LLM APIs (OpenAI, Google Gemini, Perplexity) and applying prompt engineering patterns for context-aware AI features. Strong JavaScript fundamentals with a background in REST API integration, browser-based automation, and agile development practices.

EDUCATION

Bachelor of Computer Applications (BCA)
KLE Society Degree College - 8.2 CGPA

2019 – 2022
Bengaluru, India

WORK EXPERIENCE

FrontEnd Developer
Entrar

Mar 2026 – Present
Bengaluru, India

- Expanded technical expertise by building new components with Material UI, and implementing robust form handling and validation using Formik and Yup.
- Integrated into a live production codebase, actively fixing frontend bugs and delivering new UI components that enhanced the company's core web application.
- Collaborated on an internal AI initiative, implementing AI-driven features in the product frontend with a strong emphasis on usability and seamless API interaction.
- Applied advanced frontend techniques such as debounce, pagination, and dynamic data loading with infinite scroll to deliver faster performance and a smoother user experience.

Software Developer
Inventys Pvt Ltd

Feb 2023 – July 2025
Bengaluru, India

- Designed and maintained reusable React components forming the core UI of an RPA-based automation platform, contributing across full agile development cycles.
- Built complex form-driven automation workflows with validation, conditional rendering, and dynamic state updates using React and TypeScript.
- Integrated frontend interfaces with backend REST APIs, handling authentication, loading states, error boundaries, and edge cases for stable, production-ready UX.
- Managed application state using Redux and React Hooks ensuring predictable data flow across large, interactive automation interfaces.
- Architected Chrome extension features enabling browser-based automation and web recording workflows, closely mirroring workflow automation concepts in enterprise platforms.
- Engineered full-page screenshot capture by stitching viewport-level images using Chrome APIs, delivering accurate visual recording for automated test documentation.
- Built DOM tree extraction logic capturing structured page metadata in JSON format, enabling downstream automation and dynamic workflow generation.
- Enhanced automated file upload handling within recorded workflows, enabling end-to-end automation without manual intervention.
- Debugged and resolved production UI issues across web and extension components, maintaining application stability and fast feedback loops.

PROJECTS

Invoice Book – Cross-Platform Invoice Management | [Demo](#) | [Code](#)

2024

- Planned and delivered a cross-platform invoice management application using React and TypeScript with clean UI workflows.
- Applied centralized Redux state management supporting invoice creation, editing, and listing with complex financial field validation.
- Optimized frontend performance using lazy loading and memoization, maintaining responsive interactions under heavy form state.
- Packaged the application using Tauri delivering a lightweight desktop experience with fast startup time.

Spy – Windows Process Monitor & Screen Capture Tool | [Code](#)

2024

- Built a Windows desktop utility using WPF and .NET Framework that enumerates all active user processes and enables targeted window capture and real-time monitoring of selected processes.
- Implemented real-time window screenshot capture with a live preview pane, allowing users to visually track and document the state of any selected application window.
- Developed keyboard and mouse action monitoring for specific process windows, capturing user interactions in real time to support detailed behavioral analysis and workflow documentation.
- Engineered a process highlight feature for improved visibility in the process list, alongside a configurable image export workflow supporting user-defined file formats and save destinations.

TECHNICAL SKILLS

Frontend: React, Next.js, TypeScript, JavaScript (ES6+), HTML, CSS

State Management: Redux, React Hooks, Context API

AI & LLM: OpenAI API, Google Gemini API, Perplexity API, Prompt Engineering, Multi-turn Context Management, RAG Concepts

Automation & Browser: Chrome Extensions, DOM Manipulation, Chrome APIs, RPA Workflows

Desktop: WPF, .NET Framework

Tools & Practices: Git, Vite, REST API Integration, Chrome DevTools, Responsive Design, Agile Development

CERTIFICATIONS

HackerRank JavaScript (Basic) – 2024: Validated understanding of core JavaScript concepts including functions, objects, arrays, and problem-solving. [Certificate](#)

HackerRank Problem Solving (Basic) – 2024: Demonstrated logical reasoning and basic data structures for programming challenges. [Certificate](#)

ADDITIONAL INFORMATION

Key Strengths: JavaScript fundamentals, REST API integration, LLM/AI feature development, browser-based automation, prompt engineering, debugging production issues
